WELCOMING OUR ROBOT OVERLORDS:
WHY YOUR NEXT HR "HIRE" MAY NOT BE HUMAN

Generative AI, Machine Learning and Automation are disrupting HR and Talent functions around the globe and incorporating technology into HR processes can deliver significant benefits and cost savings. These current, yet continuously evolving technologies, are disrupting the world of organizations AND HR professionals today – with more to come! In this session we discuss how HR teams are using various forms of technology and AI to add efficiency while simultaneously improving the employee experience **and** maintaining a human touch. We define various technologies, explore ChatGPT and similar tools, and discuss the potential landmines inherent in the use of algorithms and "big data" in this brave new world.

- Gain an in-depth understanding of how generative AI, machine learning, and automation are revolutionizing HR and talent management.
- Explore the various forms of technology and AI being employed in HR and learn about the practical applications.
- Identify potential challenges and ethical considerations associated with the use of algorithms and big data including the risks, the importance of maintaining transparency and fairness, and strategies for mitigating biases and privacy concerns in the digital HR landscape.
